EOS REQUEST/REFERRAL

WHAT IS EOS IMAGING?

EOS imaging offers ultra-low-dose 2D-3D imaging, capturing high-quality images in natural standing positions. Its personalised 3D bone modeling in a weight-bearing stance provides unmatched insights into joint interactions, lower limbs, spine, and the musculoskeletal system. EOS revolutionises the diagnosis and treatment planning for conditions such as bone and joint disorders, along with spinal deformities like scoliosis.

FAQs

How should I prepare for an EOS scan?

No special preparation is required for an EOS exam, but wear loose-fitting clothing without metal buckles, zips or fasteners. A gown may be provided if required for your convenience. If pregnant, inform your doctor and our staff when booking.

Bring a current referral, any relevant films, reports, and your Medicare or Department of Veterans Affairs card.

What will happen during my appointment?

You will be asked to step inside the scanner and remain still. The scanner, gentle and non-intrusive, moves vertically from head to toe without touching you. With two perpendicular x-ray tubes and detectors capturing front and side views simultaneously. A skilled and experienced radiographer will perform the scan.

How long does an EOS scan take?

The setup for an EOS scan lasts around 5 minutes and the scan itself is incredibly quick and takes approximately 20 seconds.

What are the risks of having an EOS scan?

This low-dose imaging system delivers radiation 9 times less than standard xray and 20 times less than computer tomography scans. This is beneficial for patients who require frequent imaging and for paediatric imaging. EOS imaging does involve a very small dose of radiation, which makes this test unsuitable for women who are, or might be pregnant.

After your examination

Your doctor will receive a detailed 3D model of your skeleton with precise measurements from head to toe. A radiologist will interpret the scan and provide a comprehensive report to your referring doctor. Ensure a timely follow-up appointment to discuss the results, which will be sent directly to your referring doctor. Your EOS scan images are accessible via the patient portal and reports are usually available within 5 days, allowing time for your doctor to review before your follow-up.

EOS IS BULK BILLED *(for all Medicare eligible examinations)*

EOS is currently available at:

HOXTON PARK PRACTICE

Landmark Shopping Village,
525 Cowpasture Road,
